EXPERIENCE

DATA & REPORTING ANALYST

University of Louisville | Louisville, KY | Sept 2025 - July 2026

Analyzed large qualitative and quantitative student and faculty data to create reports for leadership across departments using Excel, SQL and Power BI to support academic and operations planning.

- **Reduced average reporting time from 3 days to 30 min** by automating the ETL process for 1,000+ student records using Python and Excel to extract, clean, transform, and validate data for inter-school reporting.
- **Analyzed and consolidated 1,000+ student records using PivotTables, XLOOKUP, and INDEX-MATCH**, categorizing data by program, category, and income to support admissions reporting and decision-making.
- **Consolidated and standardized 3 years of Excel reports into a single PowerBI dashboard** with weekly, monthly and yearly reporting, consolidating career and coaching datasets used by the Director of Career Center and employee relation managers.

UX & BUSINESS ANALYST

Saddleback Church | Remote | July 2023 - June 2024

Tracked and analyzed user engagement metrics alongside qualitative research to identify behavioral trends, delivering data-driven insights that shaped product design and stakeholder outreach.

- **Improved product usability by 10%** by evaluating engagement metrics and survey responses from 120+ stakeholder interviews to identify usability trends helping the product team to prioritize to ship product improvements.
- **Tracked and analyzed user engagement metrics over time for all 20 campus locations**, delivering regular reports that surfaced trends in communication effectiveness informing leadership's outreach strategy.
- **Increased signup completion by 18%** by workflow redesign, using A/B testing to evaluate 3 singup flow variations helping stakeholders on final product design decision.

TECHNICAL BUSINESS ANALYST

Novelty Technology | Kathmandu, Nepal | Aug 2017 - July 2023

Led software development, analyzed data, validated business requirements using Excel, SQL, Jira and partnered with engineering teams and stakeholders throughout the Agile development lifecycle.

- **Served as central liaison and technical project manager for business and engineering teams**, analyzed 15 years of amortization data in Excel and groomed a 100+ user story backlog to prioritize and streamline feature development.
- **Saved estimated cost of 15%** by improving business processes and system workflows using data and process mapping techniques and increased data accuracy.
- **Validated 500+ data outputs in** by analyzing and verifying against business rules and expected results using SQL and Excel, identifying 12% of discrepancies and translating findings into actionable recommendations that helped stakeholders make system and workflow decisions.
- **Documented weekly project updates** and milestones to present priorities to the development team and sprint releases using Jira Confluence and user training manuals.
